

SUMMARY

Senior Unity Developer with 6+ years of hands-on experience taking mobile 3D games through the full development-to-release cycle on iOS and Android. Expert in Unity3D and C#, with strong skills in performance profiling, debugging, and live-service operation. Experienced in leading code reviews, mentoring developers, and shipping in Agile teams. Berlin-based, working European hours.

TECHNICAL SKILLS

Languages:	C#, C++, Python, JavaScript
Engine & UI:	Unity3D (expert), Unity UGUI, NGUI, Shader Graph, ECS, Addressables
Mobile & LiveOps:	Full iOS/Android release cycle, Ad/Analytics SDKs, A/B testing, remote config
Tools & Process:	Git, Jira, Agile/Scrum, Profiling, Debugging, Performance Analysis

PROFESSIONAL EXPERIENCE

Unity and XR Engineer	<i>ZAUBAR, Berlin</i>	<i>07/2025 – Present</i>
- Operate and iterate on a live-service Unity product, shipping ongoing updates across iOS, Android, and WebGL. - Profiled and optimized rendering and interaction systems, resolving platform-specific performance and SDK issues.		
Unity and AR Developer	<i>Bosch Digital, Berlin</i>	<i>02/2025 – 07/2025</i>
- Optimized rendering, memory, and asset-loading pipelines for mobile 3D hardware, reducing load times. - Authored Unity editor tools and extended a large codebase with platform-adapted features.		
Software Engineer	<i>Studio Mega Fury, Pakistan</i>	<i>07/2021 – 03/2024</i>
- Shipped mobile titles end-to-end on iOS and Android, integrating ad and analytics SDKs and reducing crashes. - Led developers through Scrum sprints, owning code reviews, build pipelines, and cross-platform QA.		
Game Programmer	<i>Trio Ford Solutions, Australia (Remote)</i>	<i>10/2020 – 05/2021</i>
- Built modular gameplay systems and tools across multiple mobile titles, iterating on mechanics and balance. - Profiled, debugged, and optimized systems for stable 60fps performance across multiple platforms.		

HIGHLIGHTED PROJECTS

Dead Island Survival (Project Link)	<i>C++, ECS, Multiplayer, Tools, Mobile</i>
- Built ECS-based mobile multiplayer systems with Photon, handling 500+ entities at a stable frame rate. - Reduced memory allocation through object pooling and profiling-driven optimization across platforms.	
Akrasin MMORPG (Project Link)	<i>LiveOps Tools, Shader Graph, AI, Modular</i>
- Developed modular multiplayer systems and LiveOps tooling supporting real-time content updates. - Reduced runtime loading and memory footprint for smooth play on low-end mobile hardware.	
Line of Control (LOC) – Multiplayer FPS (Project Link)	<i>Photon, C++, FPS Tools</i>
- Developed networked weapon systems, damage logic, and player synchronization for online FPS sessions. - Optimized networking and rendering, reducing bandwidth and holding 60fps across devices.	
Ninja Tashani (Project Link)	<i>Unity3D, C#, Combat, HUD, Animation</i>
- Built fast-paced combat mechanics and a scriptable HUD scaling across mobile device tiers. - Delivered smooth 60fps mobile gameplay via animation blending and optimized visual effects.	
The Sands of Abzu (Project Link)	<i>Unity3D, Puzzle, Shader Graph, AI</i>
- Implemented casual puzzle mechanics using event-driven architecture and lightweight AI logic. - Used Shader Graph to create polished visual effects with minimal GPU overhead on mobile.	
AR Treasure Hunt (Project Link)	<i>ARKit, ARCore, Addressables, Sensors</i>
- Built mobile AR interactions integrating object tracking, sensors, and Addressables-based asset loading. - Tested and refined gameplay through rapid iteration on real iOS and Android hardware.

EDUCATION

MSc Artificial Intelligence	<i>Brandenburgische Technische Universität, Germany</i>	<i>2024 – Present</i>
BS Computer Science	<i>University of Engineering and Technology, Lahore, Pakistan</i>	<i>2017 – 2021</i>
